

Your Elka floor is ready for use when you buy it.

Don't use any protective products, even if the packaging mentions that they are suitable for wood floors.

Follow these instructions:

1. Remove all coarse dirt with a soft broom and a dust pan.
2. Clean the V-grooves with a vacuum cleaner
3. Clean with a dry microfibre cloth as described in "dry maintenance"
3. Remove any stubborn dirt as indicated in the dirt removal guide.
4. Clean with slightly damp microfibre cloth as described in "Slightly damp maintenance"

Clean & Protect for Oiled Wood Flooring

Clean & Protect for Lacquered Wood Flooring

Weekly cleaning: Dry maintenance microfibre cloth

A traditional vacuum cleaner is generally not used to clean wood floors however floors with a V-groove are the exception to the rule. We recommend a microfibre cloth for regular maintenance, this mop is designed for dry and slightly damp use. The special fibres have a high dirt-absorption capacity. They can take up the dirt easily.

Monthly cleaning: Slightly damp clean - only use Elka Clean as directed on the bottle

We advise you to clean your floor 1 to 2 times per month with water and Elka clean sparingly. Cleaning too often, using too much water is unnecessary. NOTE: Using 3rd party products could permanently damage your floor, these products can contain waxes and harsh soaps.

It is extremely important that surplus fluid is not left standing on the floor in any circumstances.

Oiled floors will require the application of Elka Maintenance Oil minimum once per year dependent on use
