WHICH ELKA FLOOR SHOULD I CHOOSE FOR MY HOME?

real wood engineered flooring

13.5MM RUSTIC UV LACQUERED OAK

REAL WOOD ENGINEERED FLOORING

With all the aesthetics of a real wood floor, but without any of the restrictions, real wood engineered flooring is a practical design choice for any home. When laid, an Elka real wood engineered floor is virtually indistinguishable from a solid wood floor. This is thanks to the product's unique structure, which includes a generous surface layer of between 2mm and 4mm of real wood, making it possible for all Elka engineered floors to be sanded and refinished.

The strength of each board comes from three or more layers of wood laid in opposite directions. This helps to avoid any issues with contraction or expansion, making it perfect for use in areas where traditional hardwood flooring cannot be used, such as in conservatories or in conjunction with embedded underfloor heating. The simplicity of its construction makes it perfect for use in DIY projects and thanks to its strength, it can easily be installed as a floating floor.

SOLID WOOD FLOORING

Made from high quality premium, solid timber, the random length boards and natural colours of this range will add natural character and instant warmth, making this flooring a solid investment for any home. The grains and colours of Elka solids create an ambience with real character and a sense of permanence, adding beauty and elegance to your interior.

Each board is made from 18mm of 100% solid oak sourced from responsibly managed forests and are all PEFC™ certified. They can be fitted using numerous techniques, including adhering it direct to a sub floor, nailing or screwing it to timber, or floating it using Elka underlay. For more information visit elkaflooring.co.uk. Our strict production process means that every board is checked by hand at least three times before being packaged, guaranteeing a high level of quality in every detail of your new floor.

LAMINATE FLOORING

Elka's laminate range is one of the most superior quality laminate flooring ranges currently available on the market. Designed to look great and stand the test of time, we apply strict standards to each board, ensuring maximum strength and a flawless finish, the v-groove technology is an advanced bevel edging which helps to create a look that reflects the natural qualities of real wood flooring. The 12mm v-groove range is ideal for high traffic areas.

AQUA PROTECT: For enhanced water resistance, we offer the revolutionary **Aqua Protect** technology across the entire 12mm v-groove range and as an option on 8mm v-groove floors.

Most of the range features the unparalleled and technically superior Uniclic® system. Its glue-free installation process makes it fast and easy to lay or re-lay anywhere. Each board locks together securely, ensuring a seamless joint that won't allow dust or dirt to gather. With a lifetime warranty on the Uniclic® system, it means you can enjoy a quality finish for years to come.

LUXURY RIGID VINYL 100% WATERPROOF FLOORING

Capturing the stunning detail of natural wood planks, herringbone and ceramic tiles, Elka luxury rigid vinyl flooring is a stylish, hardwearing and cost-effective solution for modern living. With twelve gorgeous authentic-looking wood and ceramic designs, from timeless browns to on-trend greys available in our brand-new collection, we're confident you'll find a floor that's perfect for your lifestyle.

Manufactured in multiple layers for fantastic durability, Elka luxury rigid vinyl comes with a wealth of practical advantages, including underlay attached. Not only is the surface 100% waterproof – making it ideal for moisture-prone areas such as bathrooms, kitchens and utility rooms – it's tough, compatible with underfloor heating, sound absorbent and feels warm and soft underfoot. Built to withstand the rigours of family life, it's a breeze to clean and care for. Thanks to a sealed top layer that offers resistance against scratches and stains, vacuuming and occasional light mopping are all it takes to keep your Elka luxury rigid vinyl floor looking its best. The Uniclic® and Unizip® systems ensure fast installation, with no adhesive required. All you have to do is click the boards down into place, making Elka luxury rigid vinyl flooring a great choice for homeowners, renovators and property professionals.

THE NATURAL BEAUTY AND ELEGANCE OF AN ELKA FLOOR

BRING THE BEAUTY OF NATURE INTO YOUR HOME

Due to the increasing interior trend for flooring to have even more character, we have increased our real wood engineered range. Our products showcase many of these features where the smoking produces more colour variation than staining. The result is much warmer and the natural characteristics are even more enhanced. Our Herringbone real wood engineered floor is a classic design, it equally complements antique furniture or works well in a modern contemporary environment. Due to the distinctive pattern, care must be taken when laying the boards, but the tongue and groove system means that this classic style is now achievable in any home.

The timeless elegance of a wood floor brings warmth and beauty to every home. The variety of styles, colours and species give you a wonderful range to choose from and allows you to put your unique stamp on your living space.

Our luxury rigid vinyl and laminate ranges reflect the beauty of nature, while still maintaining a consistent quality throughout every board. Our real wood engineered and solid ranges use high grade hardwood that has been primarily selected for its hardwearing quality to ensure dimensional stability and long lasting durability.

SUSTAINABLE FORESTRY

Every year, more and more timber is available from sustainably managed forests, so every year, we improve and increase our environmentally friendly products.

The choice of a good quality floor from Elka is a smart one both for you and the environment. Our flooring is both designed to last and to be admired, so you are unlikely to want to change it for a very long time. This is especially true for our engineered and solid wood boards which actually become more beautiful with age. We might specialise in creating great home environments, but we also take great care to do everything we can to look after the environment around us. That's why as manufacturers and importers, we understand the importance of sourcing the most responsibly managed raw materials possible to make our flooring. This includes developments like the creation of laminate and engineered floors that can be installed without the use of an adhesive due to the revolutionary Uniclic® system.

Where possible, we insist upon maintaining a certified chain of custody for the majority of the timber we buy. That's why we're so proud that more than half of our product range is PEFC™ (Programme for the Endorsement of Forest Certification) certified. These awards are given to responsibly managed forests that respect the legal system, land usage

rights and the rights of indigenous peoples and their workers, in addition to guaranteeing that felled trees are replaced with saplings.

These unique international non-profit, non-governmental certification systems represent some of the largest environmental movements in the world and we are excited and proud to be a part of them. This means that when you purchase an Elka floor, you can be proud that you are choosing to furnish your home with one of the world's environmentally friendly products: natural wood from a responsibly managed forest. For any timber that isn't certified, we always ensure that it is from well-managed sources.

For PEFC™ (Programme for the Endorsement of Forest Certification) certified products, look for the following logo.

THE NATURAL CHARACTERISTICS OF WOOD FLOORING

The real wood products capture all the rustic qualities of wood and bring the very essence of nature into your home. Each floor board is unique, enriched with naturally occurring characteristics such as knots of various sizes, flared grain patterns, burls, sapwood and mineral streaks. These are characteristics of each species' individual growth process, and are all influenced by region, sunlight, climate and the soil. There are two types of knots; live knots which showcase the beautiful density of the spiral grain and dead knots which are repaired with a rich coloured filler. Any splits or cracks are filled and add a lively character to the unmistakable quality of a natural product. The colour variation within each plank reflects naturally occurring mineral and sapwood streaks and are even further enhanced when stained or treated.

ROOM FOR IMPROVEMENT

With Elka, it's now easier than ever to capture the luxury interior trends you desire. We offer a wide choice of finishes that look natural yet are extremely practical. Advancements in technology have further improved our range to ensure complete peace of mind, as our floors can cope with the extra demands on your home environment. Choose from 100% waterproof luxury rigid vinyl, water resistant laminate flooring, scratch resistant surfaces and ranges suitable for underfloor heating - now is the perfect time to create that chill-out space, home office or gym that you've always longed for.

WITH OUR NEW ELKA FLOORS, NOW YOUR HOME CAN BE A PLACE TO WORK, PLAY AND RELAX.

TONGUE & GROOVE

With all the aesthetics of a real wood floor, our real wood engineered flooring is a practical design choice for any home. Elka offers the most extensive choice of thickness, with options available using our patented Uniclic® Multifit system or the more traditional Tongue and Groove system. With exceptional strength and timeless beauty, all of our floors in this range are designed to last the test of time.

A glue-free process, the Uniclic® Multifit installation system is fast and easy to lay. Working both vertically and horizontally, the drop-down technology (slide and click) allows for an even simpler installation. Each board locks together securely, ensuring a seamless joint that won't allow dust or dirt to gather. With the lifetime warranty on this system, you can enjoy a quality finish for years to come.

Floor levelling characteristics
Exceptional acoustic insulation performance
23db sound reduction
Smooths & levels minor imperfections and braces board joints for better support
High thermal resistance: 2 tog
Durable: withstands high loads of 10T/m²
Non-absorbing, mould resistant boards

L: 856mm W: 600mm (x19 boards) Thick: 5mm

PREPARE PAGE 45

To achieve the perfect finish and ensure good performance, preparation from the ground up is key.

FIX / FINISH PAGES 46-49

The Elka range of high performance fixing products provide the right solution for every type of flooring.

MAINTAIN PAGE 50-51

Keep your floor looking as good as the day it was laid with Elka's range of products to maintain the finish of real wood, laminate and luxury vinyl floors.

EVERYTHING YOU NEED TO FIX YOUR ELKA FLOOR

Our specialist range of high performance fixing products that are safe, simple and cost effective solutions for installing Elka flooring.

ELKA GRIP

QUALITY ADHESIVE FOR USE WITH ELKA TONGUE & GROOVE REAL WOOD ENGINEERED FLOORING

500ml

A specialist D3 rated high quality resin based wood adhesive for use when fixing engineered flooring panels with a tongue & groove system.

Features and Advantages

- High strength impact resistant bond that is stronger than wood itself
- Dries clear
- Coverage 6 -10m² of T&G (dependent on the depth of the flooring groove)
- Easy clean-up using a damp cloth
- Handy 500ml bottle

Suitable for use with **real wood engineered** flooring.

ELKA TONGUE TITE

SUPERB PRODUCT FOR SCREW FIXING SOLID OR REAL WOOD ENGINEERED (18MM+) FLOORING TO ANY WOOD SUBSTRATE

200 no. per box and 1 no. adaptor bit

Designed to fix tongue & groove flooring, these 3.5x45mm screws feature the smallest heads ever, enabling them to be countersunk tidily into the rebate above the tongue so as to offer no obstruction to the matching groove on the next board.

Features and Advantages

- No need for glue or to hire a nail gun, drill bit is included in every pack.
- Easy to install in difficult locations
- If necessary, you can remove boards without damage in order to gain access to underfloor plumbing etc.
- No need to drill pilot holes, even in hardwoods.
- One size fits all boards (3.5 x 45mm)
- Boxed in 200's (covers up to 10m²)

Suitable for use with **solid** and **real wood engineered** flooring.

ELKA FITTING KIT

FOR FITTING LAMINATE AND MOST UNICLIC® FLOORING QUICKLY AND EASILY

1 tapping block, 1 pull bar and 40 spacers

Designed to make fitting your Uniclic® floor as easy as possible without risk of damaging it.

Features and Advantages

- The spacers maintain an expansion gap around perimeter
- Pull bar allows you to pull planks together at the end of rows
- Tapping block protects edges of the boards when tapping them together

Suitable for use with **laminate** and **real wood engineered** flooring.

ELKA BOND RIGID

HEAVY DUTY SYNTHETIC POLYMER FOR A RIGID BOND.

Features and Advantages

For bonding solid and engineered flooring to concrete, cementitious screeds, flooring grade plywood, chipboard, hardboard and smoothing compounds where applicable.

The Elka bond range is a versatile product that can be used for a rigid fix for both solid wood and real wood engineered flooring or a flexible fix for solid wood floors.

Coverage: 16m² when used as directed, instructions on packaging

Suitable for use with **solid** and **real wood engineered** flooring.

ELKA BOND FLEX

ELKA BOND FLEX ADHESIVE RANGE IS BASED ON THE LATEST DEVELOPMENTS IN HYBRID TECHNOLOGY AND HAS THE FOLLOWING KEY BENEFITS:

Features and Advantages

- 100% active, solvent and water-free
- Permanently flexible - compensates for wood and sub floor movement
- Will bond wood directly to all common sub floors
- Low odour
- Excellent gap filling properties for uneven surfaces
- Plyable product gives excellent sound reduction properties

Range is suitable for use with **solid** and **real wood engineered** flooring.

ELKA BOND DIY FLEX

Coverage: 1m² when used as directed, instructions on packaging

ELKA BOND TRADE FLEX

Pack includes, reusable gun, wipes and nozzles. Trade pack refill cartridges also available (packs of 12)

Coverage: 18m² when used as directed, instructions on packaging

ELKA BOND TROWEL FLEX

2 x 7kg foil packs Pack includes trowel and wipes

Coverage: 14m² when used as directed, instructions on packaging

EVERYTHING YOU NEED TO FINISH YOUR ELKA FLOOR

LAMINATE

LAMINATE PROFILES AND ADAPTORS SUITABLE FOR LAMINATE FLOORING.

The best flooring profile is no profile at all. But that's technically not possible because laminate floors may move as the result of relative humidity and ambient temperature. That's why we have come up with a new Elka 4in1 Profile that is almost invisible (narrow and flat - only 2mm) and closely matches the laminate floors. It's a combination of an adapting profile, expansion profile, transition profile and edge profile, all in a single profile.

Expansion Profile 2150 x 40 x 13mm
Adaptor Profile 2150 x 48 x 13mm
Transition Profile 2150 x 40 x 13mm
Edge Profile 2150 x 40 x 13mm

Delivered with cutter to adapt to the profile you need.

Can provide flexibility for elka laminate flooring with depths between 8mm - 12mm

Dimensions: 2150 x 48 x 13mm

FEATURES AND ADVANTAGES OF THE 4IN1 LAMINATE PROFILE

- Laminate wood finish
- Simply trim to the required profile type using the trimmer included in each pack
- Flexible - 4 profiles in 1
- Extra height adjustment can be gained when applied using Elka bond

Length: 2150mm, ideal for two door widths
 Suitable for use on floors between 8-12mm with the supporting adjustable track provided

ELKA SCOTIA PROFILE

The Elka Scotia Profile camouflages the expansion joint between an existing skirting and a newly installed Elka laminate floor. These scotia profiles can be fixed with either Elka bond or by nailing. With finishes that closely match your Elka laminate floor, it's the perfect solution.

REAL WOOD ENGINEERED / SOLID

REAL WOOD PROFILES AND ADAPTORS SUITABLE FOR SOLID AND REAL WOOD ENGINEERED FLOORING.

Elka 3in1 Real Wood Profile is a flexible finishing profile designed to complete your real wood flooring utilising the latest design technology with a practical multifunctional profile moulding. This easy-to-use profile allows you to simply trim off the area of the product not required to create one of three finishing solutions.

Expansion Profile to cover expansion gaps between two adjacent flooring products of the same height.
Adaptor Profile for use when finishing between two adjoining floor coverings where the adjacent floor covering is of a lower height e.g. carpets or vinyl.
Edge Profile to finish the flooring where a dressed edge is required eg. against a wall or window.

Trim off the area of the product not required using the supplied trimmer.

Can provide flexibility for Elka real wood flooring with depths between 14mm - 20mm

FEATURES AND ADVANTAGES OF THE 3IN1 REAL WOOD PROFILE

- Real wood veneer finish
- Simply trim to the required profile type using the trimmer included in each pack
- Flexible - 3 profiles in 1
- Extra height adjustment can be gained when applied using elka bond

Available in two lengths:
 930mm in lacquered white oak and unfinished* white oak
 2150mm in lacquered white oak or unfinished* white oak.
 Suitable for use on floors between 14-20mm with the supporting adjustable track provided

*Unfinished white oak allows the flexibility to either oil, stain or lacquer the profile on-site to match your floor.

ELKA OAK SCOTIA PROFILE

The Elka Oak Scotia Profile is made from lacquered real wood veneer and provides the perfect finish to a newly installed Elka real wood engineered or solid wood floor. It can be glued or nailed for quick and easy placing. It is the perfect finish for your solid or real wood engineered floor.

EVERYTHING YOU NEED TO MAINTAIN YOUR ELKA FLOOR

Our Elka **Clean and Protect** range is designed to be quick and easy to use, no specialist polishing required. Perfect for today's modern lifestyle, leaving you time to enjoy your home! All items are available to purchase in kit form or individually. The range also includes a Scuff Mark Remover which will remove stubborn scuff marks without damaging your floor.

Clean + Protect kit for **oiled** real wood flooring
This kit contains everything you need to clean and protect your **oiled** wood floor. Contents include an All Purpose Cleaner, an All Purpose Cleaner Concentrate and a Protector specially formulated for oiled real wood flooring.

Clean + Protect kit for **lacquered** real wood flooring
This kit contains everything you need to clean and protect your **lacquered** wood floor. Contents include an All Purpose Cleaner, an All Purpose Cleaner Concentrate and a Protector specially formulated for lacquered real wood flooring.

SUITABLE FOR USE WITH LUXURY VINYL

0.5 Litre

ALL PURPOSE CLEANER **ALL Concentrate PURPOSE CLEANER**

Ideal for removing everyday dirt and grime or as spot stain removers. Suitable for frequent use on **luxury vinyl, laminate, lacquered & oiled** finished floors.

0.5 Litre

OILED FINISH PROTECTOR **LACQUERED FINISH PROTECTOR** **SCUFF MARK REMOVER**

Protect your **real wood** floor against abrasion, scuffs and stains. Use regularly to keep your floor in good condition. Elka Scuff Mark Remover is a gentle, non-abrasive, residue-free cleaner formulated to remove stubborn scuff marks without damaging your floor.

CARING FOR YOUR ELKA FLOOR

It's so easy to care for your Elka floor. Laminate and luxury vinyl flooring is not only easy to clean, it's hygienic too. In fact, the sealed surface prevents bacteria accumulating on the floor which is great for the prevention of allergies. In general, we recommend dry cleaning the floor with a microfibre duster. Occasionally, damp cleaning can be done using an almost dry mop. Never use a steam cleaner or wet mop on your Elka floor as this will cause damage not covered by the warranty.

Real wood engineered and solid wood floors are natural products that improve as the floor ages, but to keep them looking in top condition you can top up the oil or lacquer finish. Daily cleaning requires little more than a good sweep or dry mopping. By quickly wiping up any spills immediately, you can prevent stains occurring. You can spray on a spot cleaner to deal with the mess quickly and easily. More stubborn scuff marks can be tackled with our specialist remover, minimising the risk of damaging your floor. Follow these simple steps to ensure that your floor remains looking good for many years to come.

DAILY MAINTENANCE

Sweep or vacuum your floor regularly to prevent grit and dust accumulating and scratching the surface.

Use protective pads under all furniture to prevent scratches.

Use door mats at your external doors to prevent grit and small stones being carried into the home.

Wipe up any spills immediately. Never allow any liquid to remain on the floor.

Stains should be removed immediately while they are still wet and after removal, wipe floor dry.

Do not use general household cleaners as these may dull or damage the surface. They may even leave a film residue which could make the floor slippery and more difficult to clean.

PERIODIC MAINTENANCE

Oiled and lacquered finish real wood floors benefit from reapplication of Elka Protector approximately once every six months. The advantage of this very simple maintenance step is that, with regular treatment, you can keep your floor looking as good as new. It also 'tops up' the protective barrier against abrasions, scuffs and stains.

In areas of high traffic, for example, in a hallway, your floor may start to look a little worn. You can treat this particular area as and when you feel necessary, to keep it looking in tip top condition.
